CMPE 491 Project Proposal

Project Name: CarCare+

Project URL: <https://github.com/Muharremq/Cmpe491WebPage>

Team Members:

- Emre Duzcu
- Ozan Muharrem Şahin
- Anıl Aydemir
- Yağız Çakır

Supervisor: Verena Adanova

Jury Members:

- Fırat Akba
- Eren Ulu

Project Description:

CarCare+ is a user-friendly application that helps the user with issues such as vehicle maintenance and vehicle health. It helps car owners keep track of their vehicle's mileage or maintenance history and much more. It reminds the owner of everything that is necessary for the vehicle, such as tax payments, oil changes, vehicle inspection, etc. In addition, CarCare+ application can be integrated with APIs to track vehicle status.

In addition to maintenance tracking, the application offers a store system where the prices of vehicle related products are listed. In addition, vehicle owners can easily create their appointments from the application thanks to the appointment system. With reminders and notifications, CareCare+ aims to be an application that improves the daily driving experience of car owners and aims to ensure the longevity of their vehicles.
